

UJJAL KUMAR CHATTERJEE

MERN Stack Developer | Full-Stack Web Application Engineer

+91 7059377035 | ujjalchatterjee08@gmail.com | Kolkata, IN | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

MERN Stack Developer with 4+ years of experience designing and shipping scalable full-stack web applications across insurance, fintech, ERP, and EdTech domains. Proficient in React.js, Node.js, Express.js, and MongoDB with strong expertise in RESTful API design, JWT authentication, RBAC, schema design, state management, and frontend performance optimization. Experienced in designing scalable frontend architectures and collaborating across backend and product teams to deliver production-grade applications in Agile environments.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Redux, Context API, React Router, Dynamic Imports, Lazy Loading, Code Splitting

Backend: Node.js, Express.js, RESTful API Design, Middleware, MVC Architecture, Controller/Service Pattern

Database: MongoDB, Mongoose ODM, Schema Design, Aggregation Pipelines

Authentication & Security: JWT, RBAC, Protected Routes, Authorization Middleware

Performance: useMemo, useCallback, Debouncing, Throttling, Pagination, Memoization, Virtual Lists

Deployment & Tools: Vercel, Git, GitHub, Postman, VS Code, npm

Engineering Practices: Agile/Scrum, Code Reviews, API Contract Design, Reusable Component Architecture

PROFESSIONAL EXPERIENCE

Qbent Technologies Pvt. Ltd.

Software Engineer (MERN Stack)

Kolkata, IN

Aug 2022 – Present

Surely Digital – Insurance Management Application

- Owned React.js frontend architecture across 10+ business modules, structured reusable component library and enforced consistent patterns, reducing per-feature UI build time significantly.
- Built multi-step dynamic form engine with real-time validation for policy onboarding and claims; coordinated RESTful API contracts with backend team via Postman, cutting form errors by 25%.
- Implemented JWT authentication with protected routes and RBAC-driven conditional rendering for agent, policyholder, and admin roles.
- Applied lazy loading, code-splitting, and useMemo/useCallback optimizations to reduce unnecessary re-renders across complex policy dashboards.

Rainbow Finance – Financial & Insurance Management Application

- Owned React.js frontend for a role-based financial platform; applied lazy loading and code-splitting to resolve performance bottlenecks, improving user engagement by 20%.
- Built policy tracking, premium management, and claims dashboards with real-time API synchronization; optimized component render cycles using memoization techniques.

PIPS – Web-Based ERP & Accounting System

- Designed modular React.js frontend for a web-based ERP platform supporting ledger management, invoicing, and financial reporting; implemented Context API for global state across deeply nested trees.
- Integrated paginated MongoDB-backed APIs to handle large transaction datasets, collaborated with backend team on Mongoose schema design for financial entities and query optimization.

Tourish – Multi-Service Travel Platform

- Designed unified React.js frontend architecture supporting four independent service domains — guide booking, travel diary, eSIM provisioning, and lounge insurance — with shared state and routing.

- Consumed third-party and internal REST APIs across multiple domains; implemented Node.js middleware layer to normalize API response structures and reduce frontend data-handling complexity.
- Applied dynamic imports and component lazy loading to optimize multi-service dashboard load performance by 30%.

Webhibe Technologies Pvt. Ltd.

Software Engineer (MERN Stack)

Kolkata, IN

Feb 2021 – Aug 2022

Going Global – International Student Admission Platform

- Built full-stack admission platform on React.js, Node.js, and MongoDB; implemented end-to-end workflows for application tracking, document management, and institution discovery.
- Designed MongoDB schemas and Express.js route structure for secure RBAC workflows; implemented JWT-protected API routes differentiating student, counselor, and admin access patterns.
- Participated in Agile sprints, code reviews, and API design discussions; contributed to architecture decisions for scalable data flow and async request handling.

PROJECTS

Surely Digital – Insurance Application

[Link](#)

Tech Stack: React.js, Node.js, Express.js, MongoDB, JWT, RBAC, TypeScript (Basic)

- Delivered production insurance platform with RBAC across three user roles; structured reusable React.js component system with TypeScript prop interfaces for type safety across modules.
- Designed MongoDB schemas for policy, claims, and user entities; built Express.js service layer with async/await patterns and centralized error handling.
- Reduced form errors by 25% via multi-step validation architecture; integrated full policy lifecycle APIs with JWT-protected routes.
-

EDUCATION

Jaipur Engineering College and Research Centre

Master of Computer Applications (MCA) | Graduated: 2023

Maulana Abul Kalam Azad University of Technology

Bachelor of Computer Applications (BCA) | Graduated: 2019

CERTIFICATIONS

Full-Stack Development – Simplilearn

ADDITIONAL INFORMATION

Languages: Bengali, Hindi, English

Interests: Photography, Photo Editing, Reading
